PHE Canada What makes a teacher, a great teacher? School-Based Mental Health ● Content knowledge ☑ ❷ Quality of instruction ☑ S Classroom climate ☑ uOttawa ④ Classroom management ☑ Is a cher beliefs Dr. Tracy Valilaroout Professor and Tier 1 Canada Research Chair, School-Based Mental Health and Violence Prevention Elected Member of the Royal Society of Canada O Professional behaviour Counselling Psychology, Faculty of Education School of Psychology, Faculty of Education School of Psychology, Faculty of Social Sciences Brain and Mind Research Institute, Faculty of Medicine uOttawa ☑ Strong evidence | ☑ Moderate evidence | ☑ Some evidence @tvaillancourt13 Coe et el., 2014

Learning Objectives

• Overview of children's mental health (MH)

Provide the second s

There is no health without mental health

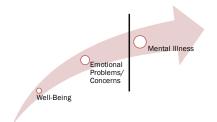

DSM 5 Definition of MD

 Clinically significant behavioural or psychological syndrome or pattern that occurs in an individual

 $\ensuremath{\boxtimes}$ includes present distress or disability, or

 $\ensuremath{\underline{\texttt{M}}}$ increased risk of suffering death, pain, disability, or an important loss of freedom

Continuum of MH

Distress and/or disability differentiates children across continuum

National Comorbidity Survey

- 13 to 18 year-olds
 - Anxiety disorders = 31.9%
 - Behaviour disorders = 19.1%
 - Mood disorders = 14.3%
 - Substance use disorders = 11.4%
 - With severe impairment &/or distress = 22.2%

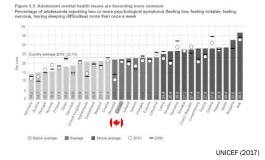

N= 10,123; Merikangas et al., 2010

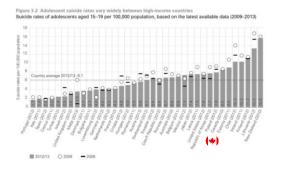

- ☑ 18-22% have serious MH problems
- ☑ 22% experience 2+ psychological symptoms per week

Georgiades et al., 2019; UNICEF, 2017; Vaillancourt & Boylan, 2018

"adolescent MH is a growing concern"

Suicide— leading cause of death among youth in high income countries - 17.6% of all deaths - Particular problem for boys

Enormous continuity

☑ 50-75% of adult MH disorders begin before age 15

Kim-Cohen et al., 2003; Kessler et al., 2001; 2007; Weisz, 1998

☑ In youth...

leading cause of health-related burden

✓ In adults...

leading cause of disability worldwide

 14.3% of deaths world wide are attributable to mental disorders

Copeland et al., 2015; UNICEF, 2008; Whiteford et al., 2013

Children do not 'code switch' out of a MD

- exists across a variety of contexts
- entrenched

오

Comorbidity

- · Rule rather than the exception in MH
 - 40% of youth with one psychiatric disorder met diagnostic criteria for another psychiatric disorder
- Girls are more affected by:
 - Mood disorders
 - Anxiety disorders
 - Eating Disorders
- · Boys are more affected by:
 - Behavioural disorders
 - Substance use disorders
 - ASD

Vaillancourt & Boylan, 2018

Risk is not equally shared

- Socioeconomically disadvantaged youth
 - 2 to 3 times more likely to develop MH problems
- Rural-urban differences
 - Youth living in small to medium population centres have more MH problems than youth in large urban and rural areas

Developmental Trajectory

• Typically begins with...

Georgiades et al., 2019; Reiss, 2013

Vaillancourt & Boylan, 2018

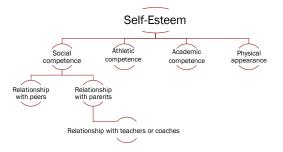

Diagnostic Challenges

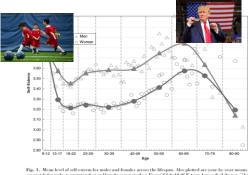

Self-Esteem

• Appraisal made about our worth and feelings that correspond with this appraisal

Consists of several hierarchically organized self-evaluations

rug. 1. Mean level of self-esteem for males and females across the lifespan. Also plotted are year-by-year means, separately for males (open triangles) and females (open triangles) and females (open triangles) and females (open triangles). From "Goldad Self-Esteem Across the Lifespan," by R.W. Rohms, K.H. Tressenski, J.J. Tressy, S.D. Golling, and J. Jotter, 2002. Psychology and Aging, 17, p. 428. Gopyright 2002 by the American Psychological Association. Reprinted with permission.

Greatest Structural Changes

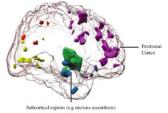

Fig. 3. Illustration of the brain regions showing the greatest structural changes over early and late adolescence (from Sowell et al., 1999).

PFC and Nucleus Accumbens

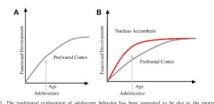

Fig. 1. The traditional explanation of adolescent behavior has been suggested to be due to the protracted development of the prefrontal cortex (A). Our model takes into consideration the development of the prefrontal cortex together with subcortical limble regions (e.g., nucleus accumbens) that have been implicated in risky choices and actions (B).

To get teens motivated they need

- ↑ excitement or
- \downarrow effort or both

Adolescence is a period of low motivation...but depression is a disorder of motivation

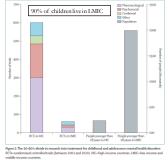

Heterogeneity

• Some youth will have the same diagnostic label but will look very different from each other.

- ☑ Most Canadian youth do not receive services
 - Only 20%
- \boxdot Youth with severely impairing mental disorders received Tx at \Uparrow rate
 - ADHD and behavioural disorders

Evidence-Practice Gap

Kieling et al., 2011

Mental Health Commission of Canada (2017); Merikangas et al., 2011

- Gap between MH needs of Canadian youth and specialized services available is currently too large to bridge
- Gap between MH needs of Canadian youth and specialized services available is currently too large to bridge
- Educators are currently bridging this gap

School-Based Mental Health

- Detrimental impact of MH problems on education-related outcomes
 - 🗵 lower academic achievement
 - Iess school engagement and participation; more likely to drop out of school

Whitley, Smith, & Vaillancourt, 2018; Vaillancourt & Boylan, 2017

− I poorer peer relationships

School-wide efforts

- improving school climate
- creating safe schools
- ☑ addressing the whole child
- character education
- ✓ social-emotional learning
- ✓ bullying prevention

Durlak et al., 2015; Kull et al., 2015; Whitley & Gooderham, 2015; Whitley, Smith, & Vaillancourt, 2017

Promoting positive MH at school

- Make curriculum connections to build capacity among students
- Use programs developed for teaching social and emotional skills and strategies that enhance resilience
- Reduce stigma 🗹
- Create a positive classroom environment ✓

Ministry of Education, Supporting Minds, 2013

- · Consistently shown that boys compared to girls
 - Have less knowledge about mental health
 - Experience higher mental health stigma
 - Less willing to use mental health services

✓ Create a positive classroom environment

Chandra & Minkovitz, 2006; see meta-analysis by Kaushik et al., 2016

School Climate

- · Quality and character of school life
 - collective beliefs, values, and attitudes that prevail at school

Cohen et al., 2009; Koth et al., 2008; Modin & Östberg, 2009

clear and consistent rules, physically safety, attitudes about violence and bullying quality of instruction, extent to which social-emotional and academic learning is valued, whether professional development is systematic and ongoing

ğ

feaching & I

respect for diversity, connectedness anong members softwarthy, positive positive positive between students, educators, and families

including cleanliness, order, appeal of the facilities, and adequate resources

Cohen et al., 2009

Positive School Climate = Better Academic Achievement

- mathematics
- school support = \uparrow GPA
- school bonding = ↑ academic achievement

- + changes in SC were related to

Poor perceptions of SC related to ψ GPA

- What can teachers do to improve student MH?
- Improve school climate

Assess levels of structure and support

- Do not have to choose between strict discipline and being supportive
 - ${\ensuremath{\overline{\mathrm{M}}}}$ Aim for high structure and high support
 - 🗹 Authoritative teaching style

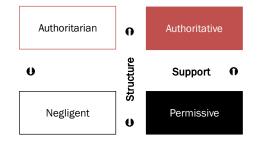

Contrasting groups of parenting

Virginia Middle Schools

 Improving school climate improves students' behaviour <u>and MH</u>.

School Climate and MH

- <u>Strong</u> links between positive school climate and better mental health
 - ★ teacher-student relations associated with wellness

Suldo et al. (2012)

Longitudinal Studies

↓ classroom climate ↑ emotional and behavioural problems

\downarrow school connectedness \rightarrow

- depressive symptoms 1 year later
- anxiety symptoms for girls
- general functioning for boys
- controlling for prior symptoms $\ensuremath{\boxtimes}$

Dadds et al., 2006; Somersalo et al., 2002

What is your teaching (coaching) style?

What else can you do to help improve the MH of your students?

Relationships matter

- Focus on your students' peer relationships
 - Is everyone include in your class?
 - Teachers should be creating the groups not the students
- Need to belong is a fundamental human motivator
- Belonging is strongly linked to MH & resilience
 McDougall & Vaillancourt, 2015
 - Vaillancourt, 2013, 2015, 2016, 2017, 2019

Focus on your relationships with your students

- Get to know your students
- Show an interest in them that extends beyond the classroom
- Greet your students
- Invest in all your students

- Most consistent asset of resilient children
 Strong bond with competent adult
 - Usually a teacher or a coach

Luthar et al., 2000; Meichenbaum, 2005; Vaillancourt et al., 2010, 2011, 2013, 2018

There is no health without mental

health

Strive to be socially and emotionally competent

- High self-awareness
 - recognize your emotions
- High social awareness
- Exhibit prosocial values and respect others
- Manage your emotions and behaviour
 - self-regulate

Jennings and Greenberg, 2009
